Capability That Stays

Impact Learning Partners presents:

5S Implementation Training Programme

From Workplace Chaos to Standardized
Performance in 3 Days

A Practical, Hands-On 5S Programme for Operators,
Supervisors & Middle Management

5S Implementation Training Programme

Is Your Workplace a Shed or a Supermarket?

Tools missing. Materials duplicated. Employees searching up to 60–90 minutes per shift.

Most companies believe they 'did 5S'. But 5S is not an event — it is an operating discipline.

Without structured implementation, 5S fades within months.

5S Implementation Training Programme

Where is Your 5S Right Now?

Answer honestly. Every 'No' represents recoverable productivity.

- Do your operators know the current 5S audit score – without being told?
- Has every item in your red-tag area been resolved or disposed of in the last 30 days?
- Does cleaning happen on a defined schedule – or when someone notices a problem?
- Can a new operator locate any tool in under 60 seconds without asking for help?
- Do audit scores generate ownership actions – or just a report no one reads?

If you answered No to three or more: your 5S system is degrading faster than it is being sustained.

This programme stops that cycle – and builds the governance structure that prevents it returning.

The Core Transformation

From fragmented clean-up efforts to structured, sustainable workplace discipline.

Participants move from awareness to execution, from theory to real model area implementation, and from inspection checklists to accountability systems.

This programme is 50% hands-on implementation across all 5 days.

Who This Training is for:

- **Operators executing 5S daily**
- **Lean Admins coordinating audits and register**
- **Supervisors leading red-tag events**
- **Middle Managers sustaining the system**

What Participants Achieve in 5 Days:

- Lead Sort events without external support – and certify others to do the same
- Design and operate a red-tag system with named owners, deadlines, and escalation paths
- Construct shadow boards and visual controls that communicate status without a supervisor present
- Develop cleaning-as-inspection routines that detect defects before they become failures
- Diagnose 5S regression using a scoring system that identifies decay before it becomes visible
- Build a 30-day governance system that sustains 5S without requiring supervisor supervision
- Formulate a 90-day roadmap that transitions 5S from a programme into an operating discipline

5S Implementation Training Programme

Why 5S Programmes Fail (And How This One Prevents It)

- No defined model area → We select one Day 1
- Red tags without owners → Every tag gets a name & deadline
- Cleaning treated as housekeeping → Cleaning is inspection
- Audit scores without action → Every audit creates ownership

The 3-Day Journey

Day 1: Business case, Shed vs Supermarket diagnosis, live red-tag event.

Day 2: Set in Order redesign, shadow boards, contamination mapping, cleaning standards.

Day 3: Visual management board design, audit system build, Gemba simulation, 30-day action plan.

Day 4: SOP writing, audit governance framework, ownership transfer - supervisors take the lead. Sustainment system built.

Day 5: Full audit simulations, 30-day plan presentations, accountability partner commitments, program close and certificates

Business Impact:

- Distinguish wasted search time from productive activity – operators recover 30–60 minutes per shift
- Correlate workplace disorder with defect origin: contamination, wrong tools, skipped checks
- Identify which near-misses and incidents trace back to Sort and Set-in-Order failures
- Contrast audit-driven compliance with genuine ownership – and measure the difference
- Evaluate your 5S readiness as the prerequisite gate for Lean, TPM, and Kaizen deployment

***5S is not what you do
when you have time.
It is what creates time.***
